

WE GUARANTEE: THAT OUR POWER BANKS HAVE THE FOLLOWING SPECIFICATIONS:

OVER-CHARGE PROTECTION

Ensures that your battery won't charge beyond its capacity when being charged for a longer period of time. Power banks without this function can be dangerous while charging.

OVER-DISCHARGE PROTECTION

Ensures your battery is not fully depleted. A completely empty battery can't be recharged again. Power banks without this function are likely to have a short lifespan.

OVER-CURRENT PROTECTION

Ensures that it's not possible to have a high current being transferred from your power bank into your mobile device. This guarantees optimal protection to avoid damage to your mobile device.

SHORT-CIRCUIT PROTECTION

Protects both the motherboard and battery in case of a short circuit and shuts down the item without any risk of further damage to the item or user.

BATTERY QUALITY

We only use A-GRADE batteries.

BATTERY CAPACITY

All our power banks come with the stated capacity.

This is tested before the battery goes into the actual power bank.

BATTERY LIFE

All power banks have a life time of at least 300 life cycles because of the A-GRADE battery.

REAL OUTPUT AND INPUT

All power banks have the real output and input as per supplied product information.

This is tested multiple times during the production process.

INTERNATIONAL AND LOCAL CERTIFICATION

All power banks have international safety certification (CE and/or EMC-CE and/or FCC and/or RoHS) and local NRCS approval.

For an explanation on power bank related terminology and a comprehensive comparison table that provides you with the info you need in order to choose the power bank that's perfect for you, see pages 64 - 69.
